PROFESSIONAL SUMMARY

Full Stack Developer with 9 months of experience specializing in MERN stack, with additional experience in Python, Java and Next.js for building scalable web applications. Focused on leveraging AI and automation to reduce manual effort and improve system efficiency, including building LLM-powered workflows with n8n and Groq API. Previously interned at Samsung Electronics, working on automation, debugging, and maintaining 99.75% application up-time.

EDUCATION

GLA University

Bachelor of Technology in Computer Science

– GPA: 7.85 / 10

Mathura

May 2021 - Jun 2025

Delhi Public School, Mathura Refinery Nagar

Intermediate

– Percentage: 77.66%

Mathura

May 2020 - May 2021

Delhi Public School, Mathura Refinery Nagar

High School

– Percentage: 82%

Mathura

May 2018 - May 2019

EXPERIENCE

Technical Analyst Intern

Samsung R&D Institute

Apr 2025 – Jan 2026

Noida / On-Site

- Automated manual operational tasks including audits and channel consolidation sheets, reducing team workload significantly
- Developed a full stack Shift Handover Tool to streamline task and issue handovers between shifts
- Improved system efficiency through debugging and process automation
- Maintained 99.75% application uptime in production systems

Website Developer Intern

InternsElite (EdTech Company)

Jun 2023 – Jul 2023

Remote

- Gained hands-on experience and a strong foundation in the Frontend Development by developing two web applications: A Quiz Taking App and a Note Taking App.
- Enhanced development skills by implementing responsive UI using HTML, CSS, JavaScript, and ReactJS.

PROJECTS

AI Automation Agents Platform ([Link](#))

Feb 2026 – Mar 2026

- Built multiple AI-powered automations using n8n to simplify tasks like email handling, content generation, and user interaction.
- Created an email assistant that analyzes incoming emails, drafts replies, and flags urgent messages with notifications on Telegram or Slack.
- Developed workflows for YouTube video idea generation, AI image generation, and a RAG-based chat system for answering questions from stored data.
- Built additional automations including a Telegram file organizer which organizes the file according to the title names of the file.

Email Scheduling Platform ([Link](#))

Dec 2025 – Jan 2026

- Built a reliable email scheduler using BullMQ + Redis with delayed jobs, retries, concurrency control, and no cron usage, ensuring fault-tolerant delivery.
- Built a persistent worker-based system guaranteeing no duplicate emails and safe recovery across server restarts.
- Implemented rate limiting and throttling and a Google OAuth-enabled modern dashboard to schedule, monitor, and track emails in real time.

Chat Application ([Link](#))

Aug 2024 – Sep 2024

- Built a real-time chat app supporting text, audio, video, images, and speech-to-text
- Gained hands-on experience with Firebase services (authentication, storage) and real-time communication protocols
- Integrated Speech-to-Text to enable hands-free communication

AI Powered Blogging Platform (MERN + AI) ([Link](#))

Jun 2023 – Jul 2023

- Developed a AI powered full-stack blogging platform with user authentication, post creation, editing, deletion, and commenting.
- Integrated AI-driven post creation to accelerate content generation
- Applied JWT authentication and authorization to ensure secure user interactions.
- Integrated an SEO-optimized blog rewrite feature that improved search engine rankings and increased blog visibility on Google search results.

Food and Grocery Ordering Platform ([Link](#))

Jan 2023 – Feb 2023

- Developed a MERN stack platform featuring user authentication, authorization, category-based menus, shopping cart, secure payments, order tracking
- Implemented age-based food recommendations and admin dashboard
- Enhanced customer convenience by consolidating multiple services (food and grocery ordering) into a single application.
- Optimized performance using lazy loading for menu images

TECHNICAL SKILLS

Programming Languages: Python, Java, JavaScript, TypeScript, SQL

AI & Automation: Groq API, LLMs, Prompt Engineering, RAG-based systems, Vector Databases (Pinecone), AI workflow automation (n8n)

Web Technologies: HTML, CSS, JSON, OAuth, JSON Web Token (JWT)

Frameworks & Libraries: React.js, Next.js, Node.js, Express.js, Flask, BullMQ, Material-UI

Databases: MongoDB, MySQL, PostgreSQL, Redis

Tools & Platforms: Git, GitHub, Postman, AWS Basics (EC2, S3, Lambda, CloudWatch), Docker

Core Concepts: Data Structures and Algorithms, Object-Oriented Programming(OOP), OS (Linux), Database Management Systems, Networking

Other: REST APIs, Debugging, Streaming

Soft Skills: Leadership, Adaptive, Ability to identify and solve problems, Quick Learner

CERTIFICATIONS

- Artificial Intelligence Fundamentals by IBM
- Young Turks Naukri Campus Skill Contest
- Full Stack Internship – InternsElite
- Microsoft: React & JavaScript
- Google Bootcamp and other certifications
- All certificates ref link
